

Why organizations choose **Rocket.Chat** over and ?

With the Skype for Business end-of-life deadline fast approaching and Microsoft Teams being unbundled from Microsoft 365 and Office 365, it's time to explore more secure alternatives for your organization's communication platform.

01

On-prem deployments in air-gapped environments

Microsoft is neglecting on-premise communications, leaving Skype for Business Server without a convincing product roadmap. You can deploy Rocket.Chat on-premises and in air-gapped environments to ensure zero accessibility from external networks.

02

Approved to operate at IL7

Rocket.Chat allows you to have fully non-readable private conversations with end-to-end encryption (E2EE). Control access to sensitive data with custom roles and permissions, and stringent data loss prevention policies.

03

Interoperability with other platforms

Connect with users on MS Teams or Slack without the need to install another tool. With MS Teams and Slack bridges, you can securely connect users and conversations across platforms.

04

Integration with the Microsoft ecosystem

Rocket.Chat supports a wide array of third-party integrations, allowing you access to tools such as Outlook Calendar directly from your workspace. We integrate with the top drawers in the industry, enabling you to bring all your favorite tools in one place.

05

Open-source communication platform

Rocket.Chat is an open-source platform that gives you complete access to the source code, enabling you to customize and adapt our solution to fit your business needs.

06

Extended collaboration to customer interactions

Rocket.Chat allows you to go beyond team collaboration and talk to your customers. You can manage customer conversations coming from multiple channels within a single, unified Rocket.Chat panel.
